

The National Caravan Council was established in 1939 and represents all aspects of the Caravan Industry.

A major part of its activities is the protection of the public who use caravans and the improvement of standards of construction, trading and siting.

Accordingly, the National Caravan Council operates this scheme whereby all new touring caravan models produced can be inspected and certified by them as complying with British Standard 4626.

This certificate is then issued in respect of this particular model and the Manufacturer is allowed to put our badge of approval on each caravan produced of the same model, and to provide the buyer with a copy of this certificate.

Periodically, check factory inspections are carried out on the instructions of the National Caravan Council to ensure that the standard is being maintained.

THIS IS YOUR ASSURANCE THAT EVERYTHING POSSIBLE HAS BEEN DONE TO CHECK THAT THIS CARAVAN COMPLIES WITH THE BRITISH STANDARD.

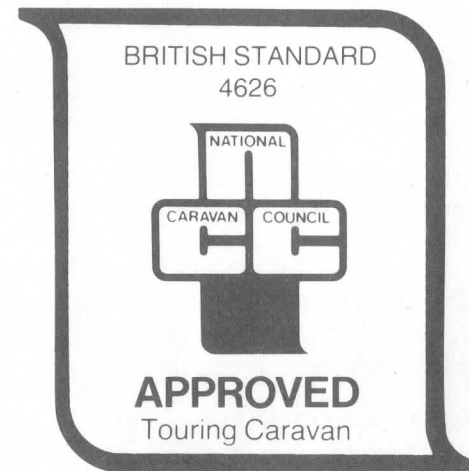

This Certificate is not valid if any modifications are carried out to the caravan that are not in accordance with BS 4626 and associated Standards and Codes of Practice within the scheme administered by the NCC.

NATIONAL CARAVAN COUNCIL CERTIFICATE

TOURING CARAVAN

This is to certify that the Touring Caravan described on page 3 of this Certificate has been approved as a model as complying with BS 4626 according to the Certification Scheme operated by the National Caravan Council.

Malcolm Street

Director General
National Caravan Council

BRITISH STANDARD 4626 COVERS THE FOLLOWING FEATURES

Sizes of Accommodation:	With particular reference to safety factors to allow occupants to get out in event of accidents.
Materials:	Shall comply with appropriate British Standards and provide a degree of fire protection.
Design and Construction:	<p>The structure shall be strong enough to stand up to normal use and be thermally insulated in (at least) walls and roof so as to minimise condensation: the body shall be capable of resisting the penetration of water, damp, insects, etc.</p> <p>Road lights and direction indicators shall be fitted in accordance with current Statutory Regulations and these shall be served by a standard and interchangeable 7-pin connector.</p>
Chassis and Undergear:	<p>There are comprehensive provisions for the undergear and braking performance, and a breakaway braking device is called for.</p> <p>The drawbar shall be sufficiently strong and the coupling shall be to the International Standard for 50 mm ball coupling.</p> <p>Tyres and wheels shall be of the correct rating for the maximum permitted weight of the caravan.</p>
Installation of Services:	Bottled gas and mains electricity must be installed properly and in accordance with accepted Standards. There shall be provision for artificial lighting and for cooking. If space heating equipment is installed it must be according to British Standards: portable heating units are not considered suitable for touring caravans.
Ventilation:	The British Standard pays particular attention to this important feature; there must be adjustable in addition to fixed ventilation.
Awnings:	Standards are laid down for the size of the awning channel and the way in which it is fitted.
Fire Protection:	A standard form of fire warning notice is required and it is strongly recommended that a fire extinguisher (water type – 1 gallon or Dry Power – 2 lbs) be carried.
Handbook:	Manufacturers are to provide a handbook which must show the name and type of model and general details and operating instructions: it must also include certain general safety precautions.

The full text of BS 4626: 1970 and any amendments may be purchased from British Standards Institution, Sales Department, Linford Wood, Milton Keynes, MK14 6LE.
